COMMUNICATION ACCESSORIES

Ethernet to RS-485 Modbus Gateway

Code	Description
EMG-02	Ethernet to Modbus gateway for communication between PC and Modbus compatible devices. (2 online connections)
EMG-12	Ethernet to Modbus gateway for communication between PC and Modbus compatible devices (up to 32 online connections)
Features:	<ul style="list-style-type: none"> • Network interface 10/100 Mbps (auto-negotiate) • 300-115200 bps baud rate (on serial port) • Power supply: 9-24V AC/DC

RS-USB2

RS-485 to USB Converter

Code	Description
RS-USB2	<ul style="list-style-type: none"> • RS-485 to USB converter for communication between PC & Modbus compatible devices. • USB 1.1 and USB 2.0 support • 300-115200 bps baud rate (auto-detect) • Powered from USB port

GEM 10 GPRS Gateway

Code	Description
GEM-10	<ul style="list-style-type: none"> • GPRS / Ethernet / RS-485 Modbus Gateway • Ports: Modbus (Terminal) Mini USB Ethernet (RJ45) • GPRS Quadband

GEM-10 GPRS/Modbus Gateway

(modem) enables access to devices that communicate with Modbus protocol over GPRS or Ethernet networks. With **GEM-10**, users can perform Modbus TCP communication over GPRS or Ethernet as well as use these two connection options as backups for each other.

RS-485 Repeater

Code	Description
RPT-1	<ul style="list-style-type: none"> • RS-485 to RS-485 Repeater for long distance (600m) or more than 32 devices • Variable transfer rate 300-115200Bps • Variable Data Format

247 Devices can be connected serially by using repeaters

GSM CONTROLLERS

GEM-15 Gateway

Code	GEM-15
Supply	3-5VDC, < 5W
Inputs	4 x Analogue inputs (2 x 4-20mA, 2 x 0-10V) 4 x 0-50VDC Digital inputs
Outputs	4 x Transistor (3-50VDC, 125mA), 4 x Relay(3A)
Coms	GSM, Modbus TCP, RS485, USB
Size (LxHxD)	126 x 58 x 90mm
Log Record Capacity	196 000 Separate Parameters
Application	As Coms module for other equipment, Sending/receiving IO data over Modbus RTU, Controlling outputs based on input status, Sending SMS status messages

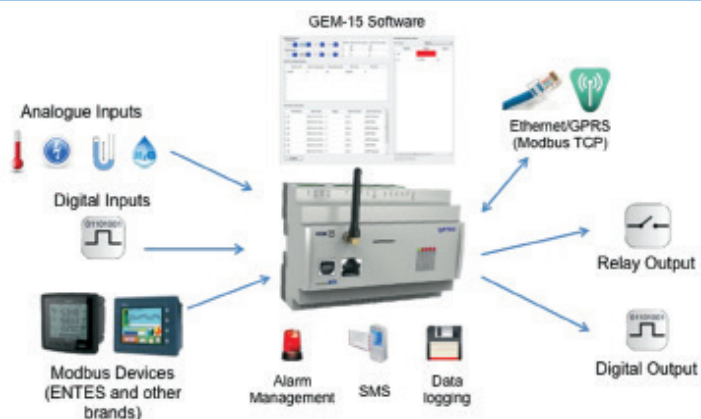

The **GEM-15** modem RTU is an advanced I/O device using GPRS and Ethernet communications. It performs remote control and monitoring operations of values such as temperature, humidity, pressure and electrical parameters via analogue and digital inputs/outputs.

It can communicate with all devices using Modbus RTU protocol, read stored register information and assign alarms.

It can be remotely configured and the analogue and digital inputs can be monitored to produce reports for data analysis.

The on-board SIM card allows the device to send user defined SMS's programmed for alarms/alerts.

Configured through USB.

REMOTE MONITORING SOFTWARE

Monitoring Screen

ENTBUS PLUS - Standard Remote Monitoring Software

Code	Description
ENTBUS PLUS-5	Remote Monitoring Software Max. 5 Devices
ENTBUS PLUS-10	Remote Monitoring Software Max. 10 Devices
ENTBUS PLUS-25	Remote Monitoring Software Max. 25 Devices
ENTBUS PLUS-50	Remote Monitoring Software Max. 50 Devices
ENTBUS PLUS-75	Remote Monitoring Software Max. 75 Devices

Entbus Plus software basically reads and records data from ENTES devices with communication features in intervals specified by users. Built-in Reports feature uses this data to create comprehensive reports.

Web Module

Structural Features

The software is composed of 3 modules:

- The Server Module collects data from devices in the field and records this to the database in preferred intervals.
- In the Monitoring Module, the user monitors parameters measured by devices in the system. The user can form monitoring panels that also include front panel views of devices, and create personalized monitoring screens by drawing line diagrams.
- In the Web Module, instant monitoring can be performed with the use of a web browser. User-friendly and easy configuration features facilitate performance desired analysis.

Graphical Design Screen

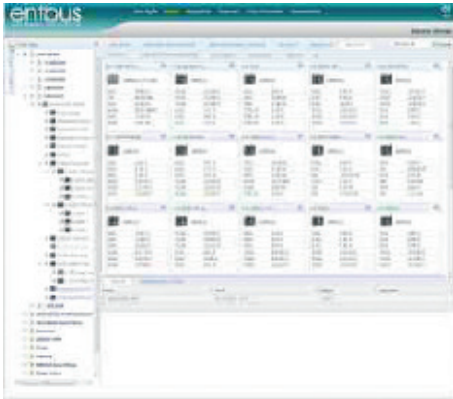

Functional Features

- Users can be defined at two levels.
- A user at the administrator level can reach any step of the software.
- A user at the operator level cannot reach remote device settings, diagram design, and software settings. Operator level can only perform monitoring and analysis functions.
- Depending on user preferences, the data from the devices can be monitored from a diagram or a table displaying all parameters.
- The parameters of the devices can be modified based on user authorization.
- A mimic diagram can be designed.
- Hourly, daily and monthly energy reports can be received.
- Hourly, daily, and monthly maximum values reports can be received.
- Total energy, power factor correction and regional energy reports can be received.

REMOTE MONITORING SYSTEM (100+ DEVICES)

The new-generation **ENTBUS PRO** web based energy monitoring software enables management of improvements in energy consumption and operating costs and assists in reaching energy efficiency goals. **ENTBUS PRO** tracks the energy consumption of facilities regardless of time and location and enables users to remotely control equipment. Parameters transferred over Ethernet/GPRS are instantly tracked, saved and archived.

Code	ENTBUS PRO
Features	<ul style="list-style-type: none"> • Online Monitoring • Real-Time data collection • Alarm management • Remote configuration of measurement devices • Reporting collected data, graphical display, and exporting in .xls format • Access via Internet / Intranet • Multilingual • Devices of different brands and models compatible with Modbus can be monitored & controlled • Defining virtual devices and virtual parameters • Detailed filtering feature for reports • Alarms sent via email and SMS

System Structure

Data from communicating devices are transmitted to the server via Ethernet converter or GPRS modem. Users access data by connecting to the server over the Internet.

• Monitoring Screen

Allows the electrical parameters of the devices to be tracked instantly and shows the hierarchical structures of devices on the device tree.

• Options Screen

Displays and defines user information and allows users to subscribe to defined alarms

• Reports Screen

Users can receive 27 different reports from data saved in the system. Reports can be displayed as graphs and/or tables and saved in PNG, BMP, XLS, CSV and XML formats.

• Device Commands

Enables remote configuration of devices. Can also display log records of the devices that have the function of recording logs.

• Configuration

Basic Entbus configuration screens where Definitions including region, connection point, device, user and alarm are performed here.

• Alarm

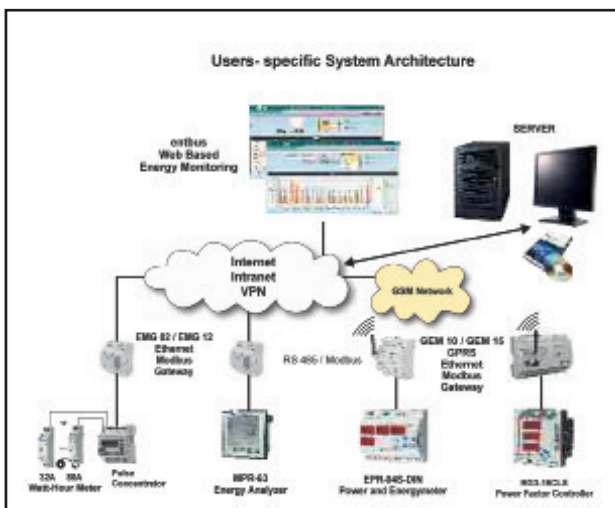

When any parameter of a device exceeds the specified limits, the system sends users an email and/or SMS notification.

• Virtual Device

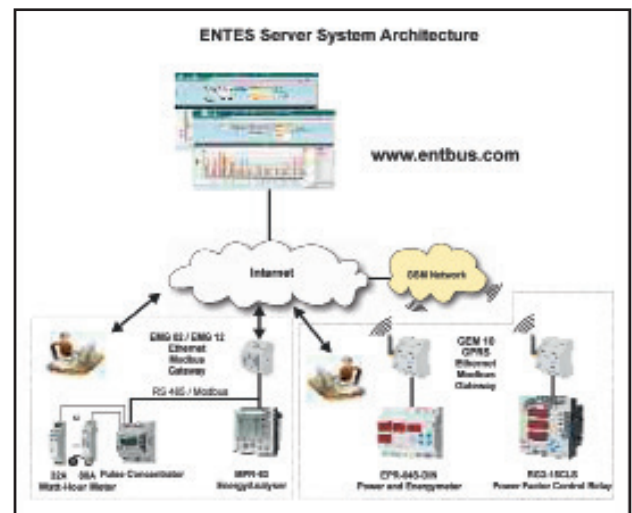

For places where measurements cannot be taken, values are measured with virtual devices. All operations that can be performed mathematically are displayed on the tracking screen as if a real device is making measurements. As a result, losses and unrecorded usage can be easily detected.

System Architecture

ENTBUS PRO software can be utilized in two ways.

Application Model 1: Users can install the software on their own server. The software is installed in user's server. The data is collected by running the software on the intranet or web. The user can modify the settings of own devices also can analyze this data and perform reports.

Application Model 2: Users can run software over www.entbus.com. In this application, the software is installed on the ENTES server. The users can identify their devices to the ENTES server without installing software, purchasing a server, or using extra workforce. This data is stored and processed on the ENTES server. The users can connect to the ENTES server over the web (www.entbus.com) at any time, reach their data with their own password, analyze their data, and receive the reports generated by the system.

Note: ENTBUS PRO Software is customized to each application. Please contact our ENTES brand specialist for more information and pricing.

AUTOMATION PRODUCTS

Digital Timer Switch

With triggering function. Independent self supply from internal battery.

Liquid Level Relay

Astronomic Weekly Timer / Daylight Switch - 230VAC

Just program in your geographical co-ordinates and the unit will do the rest. Can also use a photocell to give additional control.

Code	MCB200
Time Ranges	0.2-9999s/0.1-9999min
Supply Voltage	230V (85-315VAC/DC)
Output Type	1 C/O
Reset Time	<120ms
Rated Current	6A@230VAC
Mounting	DIN Rail
Battery Life	10 Years / 1000 000 operations

Triggering Input Functions

- Asymmetrical Flasher
- Symmetrical Flasher
- Delay
- OFF Delay
- Pulse

Code	SSRC-04*
Supply	*230VAC, 400VAC *Add voltage to code
Function	SSRC-04 is used for the level and discharge control of conductive liquids in tanks located in industrial plants and domestic applications. The output relay switches ON when the liquid reaches the upper level electrode. The output relay switches OFF when the lower level electrode is no longer in contact with the liquid. The sensitivity (i.e. impedance between electrodes) can be adjusted to 5-50Ω for different liquids by means of the knob of the front panel. The LED on the front panel lights when the relay is ON position.
Output Relay	1C/O 8A
LED	LED Green: Power LED
Indication	LED Red: Relay on LED
Dimensions	35mm width DIN mounting

Code	Description	Relay Output
DTR-14	Astronomic timer with photocell	2C/O (8A)
DTR-10	Astronomic timer	2 C/O (8A)
DTR-10T	Astronomic timer	1 C/O (16A)
FG-GOZ	Photocell sensor for DTR-14	-

- Battery back-up: 5yrs.
- Super capacitor for additional 10hrs reserve
- No. of programs: 15
- Operating accuracy: ≤1 sec/day.

kVar Selection formula: kWx Factor required = kVar required

Example: Load of 400kVA at 0.7PF, correct to 0.96PF
 From the above table factor is 0.729
 Convert kVA to kW (Useful Power): kva x PF = kW
 400 x 0.7 = 280kW (useful power)
 Therefore size of capacitance required:
 Useful Power (kW) x Factor = kVar
 280 x 0.729 = 204.1kVar

Savings for this example:
 280kW ÷ 0.7pf = 400kVA
 280kW ÷ 0.96pf = 291.7kVA
 Reduction = 108.3kVA
 Saving = 27%
