CT3K *	11 Pin one-shot pulse start timer
CT2W *	8 Pin one-shot timer
CT3W *	11 Pin one-shot timer

*Add voltage to code:
S (9.5-18VDC for timer A, B, E, K & W)
L (20-65VAC/DC, for timer A, B, E, K & W)
M (90-150VAC/DC for timer A & K),
U (180-265VAC/DC for timer A & K),
H (90-265VAC/DC for timer B, E & W)

The module **CT2** & **CT3** are electronic timers which are designed to be inserted between a standard plug-in relay and its socket, enabling the relay to be operated as a timer relay. The relay coil voltage must be in the range shown for each model.

2-Wire AC

Supply Voltage: 20 to 250VAC, 50/60Hz
Minimum Load Current: 10mA
Continuous Load Current: 400mA
Off-state Quiescent Current: ≤2.5mA at 250V AC

These sensors are not protected against sustained over current fault conditions. The fitting of an external inline 0.4A fuse is therefore advised.

DC Sensors are to be connected to a DC power supply and can switch loads (e.g. Relays, solenoids, PLC's) directly.
Supply Voltage: 10 to 60V DC
Maximum Ripple: 10%
Maximum Load Current: 400mA
Quiescent Current: <10mA
Polarity Protection: Yes
Overload Protection: Yes
Short Circuit Protection: Yes

Intelligent Canline Sensor IP67

The Intelligent Can Line Sensor has been specifically designed and developed for detecting the presence and movement of cans and automated can making and can filling lines. When interfaced with Programmable Logic Controller (PLC) the sensor's integrated intelligence released the PLC from time-consuming computing activities.

The Can Line Sensor is versatile enough to be used in a variety of applications.

Some of these are:

- Gap-detection (missing cans)
- Pile-up detection
- Proximity and motion detection
- Built-back control
- Detection of missing tops or crowns on bottling lines

Pressure Transmitter IP65

PT1X*PR01**

- Accuracy to better than 0.5%FS (including linearity and repeatability)
- Transducer rated at 50 million cycles
- Metalwork made of Type 316 Stainless Steel
- Protected against reverse voltage and overvoltage
- Protected against noise on the supply line
- Wide supply range, 8 to 36VDC - allows a wide range of load resistance
- Transducer is temperature compensated by means of laser-trimmed resistors
- Operating temperature range from 0°C to +85°C
- Internal Trimpots for field calibration

Transmitter

GENERAL SPECIFICATIONS

Output: 4 - 20mA
Excitation: 10 - 36V DC
Accuracy (BFSL): < 0.5% FS
Compensated Temp. Range: 0° to 85° C
Temperature error zero: < -0,02% FS / K
Temperature error span: < -0,01% FS / K (0-70°C)
Ingress protection: IP65
Burst pressure: 1.5 x FS (except when indicated)

Wetted Parts/Connection: 316 Stainless steel, ceramic, Nitrile (Specify media where Nitrile is not compatible)

Code	PBB-* - ** - *** - **** - *****	PBG-* - ** - *** - **** - *****	PBN-* - ** - *** - **** - *****										
Connection A-Bottom Connection D-Rear Connection	This gauge is ideally suited to most industrial applications where high accuracy and durability is required. Gauges are available with either brass/bronze internals, all stainless steel internals, or Manel Bourdan tube and socket with stainless steel movement.	For heavy duty services where vibration or shock of medium would cause excessive wear on a dry gauge or corrosive ambient conditions prevail. Applications include hydraulic equipment, mining equipment and irrigation.	For non-corrosive liquids and gases on light duty service in more corrosive environments. Applications include coastal application for valve positioner and regulators, swimming pool pumps and stationary irrigation systems.

	Isolation valves and gauge cocks to isolate pressure from gauge. Equipped with a facility to vent the gauge. Suitable for use with gases, liquids and vapours. Material - Brass	Material Max Pressurer Gauge Port Application	Grade 316 SS 40 MPA 1/4", NPT or BSP Is used in health and dairy application, can be used for pulp/paper. For non-corrosive liquids and gases on light duty service in more corrosive environments.	316 Stainless Steel 150 Mpa 1/4" or 1/2", NPT or BSP Is used in applications where the process fluid (medium) is corrosive or viscous (could even contain waste particles) and could clog the instruments internals.	Grade 316 SS 150 Mpa 1/4" and 1/2", NPT Flanged seals, one for continuous use for safety concerns. Cleanout type for easy cleaning with flushing connections available.

Note: Voltage rating of the (Zener) diode should be higher than the DC supply voltage. Observe the correct polarity.

Note: Voltage rating of the VDR or the capacitor "C" must be higher than the supply voltage. Different values for "R" and "C" may have to be chosen, depending on the load.

Note: Connection of the bridge rectifier to be as close as possible to the current transformer. CT protection.
